### President M8000 Fixed Mount DSC VHF

Amazing Deal! This top specification, waterproof fixed mount DSC VHF normally retails for £199 but as a special UK launch offer, we've 500 at an amazing price of just £119.95 - a 40% saving! Uniden are a very large Japanese manufacturer of wireless communication products with an unrivalled reputation for reliability and quality. Their products have been in the US for many years and now they're available in Europe, backed with a three year warranty.

The M8000 is also simple to install with a trunnion bracket suitable for roof, bulkhead or surface mounting. It also has a lipped fascia to make flush mounting a possibility.

To utilise the DSC functions, the M8000 is equipped with a NMEA 2000 input compatible with most leading brands of GPS. It also acts as an NMEA repeater showing vessel lat-long on its display.

The mike incorporates 15 keys for easy alpha numeric entry of DSC messages as well as channel change. Channel change can also be activated through the main front panel fascia.

Also incorporated is a hailer function - great for on deck communications. Just add a general purpose hailing horn such as the KP86 available separately.
